ABSTRACT

The invention concerns a method for producing metal strip

(1) in an installation (2), in which a metal strand, especially
a thin slab, is brought to a desired temperature and/or is
maintained at a desired temperature in a furnace (3, 3a, 3b) and
is subjected to a rolling process in a rolling train (4)
downstream of the furnace (3, 3a, 3b) in the direction of
conveyance (R) of the metal strand (1). In accordance with the
invention, to prevent the formation of scale deposits in the
downstream region of the furnace, provision is made for the
metal strand (1) to be subjected to at least one descaling
operation during its residence time in the region (5) of the
furnace (3, 3a, 3b). In addition, the invention concerns an
installation for producing metal strip.
